Here is a list of known Python-based ⊕ WikiEngines sorted by status and alphabetical order.

Active Wikis

[MoinMoin](#) -- an evolution over ⊕ [PikiPiki](#) that you're using here - multiple ways to run, plugin-based architecture with lots of plugins and large community, GPL2. (2022)

⊕ [Pwic.wiki](#) -- extendable wiki integrated with Markdown, SQLite and OpenDocument Text, AGPL3. (2022)

⊕ [SahrisWiki](#) -- Mercurial backend support, plugins, MIT licensed. (2016)

⊕ [Sphene Community Tools](#) -- Django based wiki and forum applications. (2018)

⊕ [Trac](#) -- an enhanced wiki, issue tracking and source code browser system. Supports multiple markup formats including [MoinMoin](#), [reStructuredText](#), html, and ⊕ [textile](#). Runs as ⊕ [FastCGI](#), WSGI or standalone. Pluggable architecture. Modified BSD License. (2022)

⊕ [zim-wiki](#) - WYSIWIG personal/desktop wiki with index, links, image inclusion, checkboxes and bulleted lists, equations, graphviz; calendar, ToDo; prints to clean html. Customizable, all-python over gtk2, inbuilt-server, uses filesystem as db; debian packaged. Documentation. GPL2. (2021)

Unsupported Wikis

The following projects are available but no more maintained:

🌐 Luminotes -- a WYSIWYG personal wiki notebook for organizing your notes and ideas. (2014)

🌐 Markdoc -- a lightweight Markdown-based Wiki system, public domain. (Claimed as inactive)

🌐 Pyle -- GPL wiki with multiple VCS backends, email notifications, edit by FTP and lot of other features. (2012)

🌐 Pwyky -- WyPy's big brother, by the same author. (2004)

💾 WyPy -- a 💾 ShortestWikiContest contender, 23-, 18-, and 11-line versions. (2004)

Archaeology

The following projects are not available anymore:

💾 CyberPublishing -- a wiki-based web publishing framework written in Python; GPL

🌐 Hatta -- a Wiki which runs out of a Mercurial repository whose pages are just the files in that repository.

🌐 mojibake -- based on 🌐 Sakana, runs with ModPython

💾 MonkeyWiki -- another 💾 PikiPiki fork that claims to be simple to install/use, single file, very flexible templating, rewrite-friendly.

🌐 Not-Yet-Named Wiki -- runs on Webware. Supports static publishing, WYSIWYG editing, reStructuredText

🌐 PikiePikie -- Python-based, lets you put a 💾 WebLog on any page (based on 💾 PikiPiki)

💾 PikiPiki -- Python-based, completely standalone, GPL, famous ancestor of most Python wikies

🌐 Smug - GPLed content editing system with moderation queue.

🌐 Sycamore -- seems to have roots in MoinMoin, but looks a little slicker while not as full featured. Uses a PostgreSQL or MySQL backend. GPL.

💾 ZwiKi -- based in 💾 ZoPe, powerful, GPL.
